

Disinfection method of PMMA

PMMA -Poly (methyl methacrylate)- is commonly used for automotive parts, home appliance or sundries.

Please refer the following information, when you disinfect PMMA.

<Disinfection can be used>

- **Hydrogen peroxide solution**
- **Sodium hypochlorite solution**
- **Benzalkonium chloride solution**

<Disinfection required careful handling>

- **Alcohol (Ethanol, Isopropanol)**
 - Craze or crack can happen.
 - Require special care for higher concentration.
 - Require special care for less volatilization.
